

vinylTherm

Façades in render texture

LASTING APPEAL.

vinylTherm Alpin in combination with anthracite HPL panels

Timeless render surface. Looks like render. As natural as render.

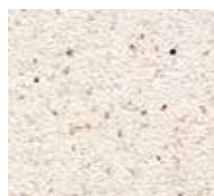

Do the ravages of time take their toll on your house? Is the render eroding, are the coats of paint fading or are you missing a contemporary thermal insulation?

Increase the value of your real estate!

The vinylTherm profiles coated with high-grade natural stone granules are weather-proof, maintenance-free, easy-care and durable. The rainscreen façade ensures, in combination with an insulation, an excellent energy balance and prevents moist walls and the formation of mould. The profiles are available in several variants and textures and in up to 16 colours. Closely joined, the profiles convey the appearance of a closed render surface. Profiles with bevel edge, laid horizontally or vertically, allow, for example, the highlighting of gables and entrance areas.

The surfaces of the profiles are made from high-quality natural stone granules which comes from different European marble quartz, limestone or granit quarries, depending on the colour.
